

Disease Control made easy!

Fungi are live pathogens that attack the living tissues of a plant. Diseases can be spread by carry-over contact, wind, or water. Latent fungi spores can remain inactive for up to five years before reproducing. Weather conditions can have a great effect on the spread of diseases in your landscape. A warm, moist environment is considered to be favorable to fungus development. A sound maintenance program can help to prevent many diseases before they become a problem. Good cultural practices can aid in helping to prevent diseases (i.e., not watering your lawn at night, proper handling of diseased plants, correct pruning practices, etc).

Brown patch, patch disease

Lawns

Brown Patch & "Take-All" Patch constitute the vast majority of fungus problems in southern lawns. We recommend a two-step approach when treating these diseases. First, apply **ferti-lome® F-Stop For Picture Perfect Disease Free Turfgrass**, followed by an application of **ferti-lome® Liquid Systemic Fungicide**. In severe cases, repeated applications may be necessary. It is advisable to apply a preventive application of **ferti-lome® F-Stop For Picture Perfect Disease Free Turfgrass** in the spring & fall. Any disease control program should be part of a sound lawn care program. *Reference to our specific "made easy" program specifically designed for your typed grass.*

Flowers, Trees & Shrubs

ferti-lome® Triple-Action Plus II Insecticide • Fungicide • Miticide should generally be used as a first line of defense against disease. However, certain diseases require more target specific fungicides. We recommend **ferti-lome® Liquid Systemic Fungicide** for both soil & airborne fungi. To prevent local disease resistance we recommend alternating between **ferti-lome® Liquid Systemic Fungicide Containing Banner & Hi-Yield® Vegetable, Flower, Fruit and Ornamental Fungicide**.

Refer to the "made easy" programs for Roses, Azaleas & other blooming shrubs or bedding plants for more information.

Vegetables & Fruit Trees

ferti-lome® Triple-Action Plus II Insecticide • Fungicide • Miticide should generally be used as a first line of defense against disease. However, certain diseases require more target specific fungicides. We recommend **Hi-Yield® Vegetable, Flower, Fruit and Ornamental Fungicide**. Be careful to follow label instructions. Refer to "Vegetable Gardening Made Easy" for more information.
