OOLTEWAH NURSERY & LANDSCAPE Co., INC.

5 Step Program for Fescue Lawns

- 1.) **February:** Crabgrass control with fertilizer. Spot treat, or blanket application broadleaf weeds with a liquid or granular weed control. Weed control can be applied every 3 weeks to 30 days. Do not plan to overseed at this time because crabgrass control and broadleaf weed control will inhibit seed germination
- 2.) **April:** Crabgrass control with fertilizer and continue to treat spring weeds every 3 weeks to 30 days.
- 3.) **June-July:** Classic lawn food is a maintenance fertilization to keep the lawn healthy through the summer month. Do not treat at this time.
- 4.) **Mid September – Mid November:** Fall seeding and new lawn starter. Core aeration and lime can also be done at this time. Do not treat broadleaf weeds at this time.
- 5.) **November:** Apply Fertilome winterizer to green up existing turf, and keep new grass healthy though the winter.

Thank You for “GROWing With Us!”

We are here to help. Advice and smiles are always free. If you have questions, stop by and bring a photo too. And remember, when you shop at a local small business, you are helping your neighbors and your local economy. Thank you for your business!
